Professional Summary

I create smart digital tools that blend technology with real-life solutions. As a student and developer, I designed Daf3etna - an app helping students navigate their academic world. I code with curiosity and design with purpose, exploring Flutter, AI integration, and impactful problem-solving.

My project lineup includes a control panel system, e-store, smart link organizer, and more in development.

Projects

Daf3etna App: A comprehensive mobile & web platform for commerce students at Alexandria University with lectures, summaries, videos, schedules, maps, and study statistics.

Link Saver App: A smart system to save and manage web links with title, description, favorites, drag-to-reorder, and edit/delete functions.

E-Commerce Store: A simple yet elegant online store with product listing, search, and cart functionality.

Admin Dashboard: An advanced control panel to manage users (activate, block, assign roles) and monitor system stats like total users and admins.

Task Manager: To-do application supporting task creation, categorization, due dates, and status updates.

Auth System: Secure login/register system with password reset functionality.

Skills

HTML, CSS, JavaScript (Advanced), MySQL (Advanced), PHP, Kotlin (Intermediate), Flutter, Dart (Learning), AI tools integration

Education

Student at Faculty of Business, Alexandria University (MIS track planned)

Languages

Arabic (Native), English (Intermediate)
